Professional Profile

Software Engineering Intern with experience in automation frameworks, healthcare software validation, workflow orchestration, and applied AI research. Worked on Python-based automation systems, healthcare analytics projects, medical imaging studies, and product validation workflows within a healthcare technology R&D environment. Interested in Software Engineering, Automation Engineering, Applied AI, and Healthcare Technology.

Technical Skills

Languages: Python, C, C++, SQL

Software Development: Object-Oriented Programming, Data Structures, Algorithms, JSON

Automation & Testing: UI Automation, AT-SPI, Dogtail, Black-Box Testing, Regression Testing, Test Design, Test Reporting

AI & Analytics: Machine Learning Fundamentals, Time-Series Analytics, Data Analysis, Computer Vision Fundamentals

Tools & Platforms: Linux, Git, Streamlit, OpenCV, OpenPyXL, n8n, Jupyter Notebook, VS Code

Experience

System Design and Development Intern — Jan 2026 – Present
Bio-Rad Medisys Pvt. Ltd. — *Bangalore, India*

- Developed a Python-based UI automation framework for Linux-based medical applications, automating approximately 250 test cases across 6 application screens.
- Implemented Excel-driven test execution, automated UI interaction, screenshot evidence generation, and PASS/FAIL reporting workflows.
- Built accessibility-based testing using AT-SPI and Dogtail to perform black-box validation of application workflows and user interactions.
- Integrated AI-assisted visual validation workflows for comparing application screens against design references.
- Designed and evaluated workflow automation solutions for OTP-based authentication using email, SMS, and WhatsApp communication channels.
- Contributed to healthcare analytics and medical imaging R&D initiatives involving glucose monitoring and computer vision applications.

Projects

GTK UI Automation Framework — 2026
Python, Linux, AT-SPI, Dogtail

- Designed and implemented a reusable automation framework for testing Linux-based medical applications.
- Automated UI validation, navigation testing, focus verification, screenshot generation, reporting, and accessibility-based testing workflows.
- Implemented AI-assisted visual validation for comparing application screens against design references.

Glucose Spike Detection and Analytics — 2026
Python, Streamlit, Data Analytics

- Investigated machine learning and algorithmic approaches for Continuous Glucose Monitoring (CGM) analysis using public healthcare datasets.
- Designed a patient-adaptive spike detection approach using historical glucose trends, rate-of-change metrics, and cumulative-rise analysis.
- Developed a Streamlit application for visualization, threshold analysis, simulation, and spike detection evaluation.
- Achieved approximately 52 minutes average lead time before peak glucose events during evaluation.

Smart Microgreens Monitoring and Growth Detection System — 2025
IoT, Research, Product Development

- Led a multidisciplinary team developing an IoT-enabled monitoring system for microgreens cultivation.
- Contributed to PCB design, 3D enclosure design, sensor integration, dataset annotation, technical documentation, and research publication activities.
- Resulted in an IEEE conference publication and Government of India industrial design registration.

Publications & Achievements

IEEE ICCDS 2025: Co-author of research publication on IoT-enabled microgreens monitoring and growth detection systems.

Industrial Design Registration: Microgreens Monitoring and Growth Detection System (Design No. 445226-001), Government of India.

Certifications

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

Oracle Cloud Infrastructure 2025 Certified Data Science Professional

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional

Google Data Analytics Professional Certificate

Education

VIT-AP University Expected Graduation: 2026
B.Tech in Computer Science and Business Systems *CGPA: 7.70*
